

2.6—Line Balancing Example

Current layout with six stations and five people serving:

1. How many people can you serve per hour at the moment?
2. If you were the manager, what could you do with the above setup, without spending any money on equipment or extra people, etc.? (Self-service not allowed; you must maintain portion control!)
3. If you could have two cashiers (and an extra person on this extra cashier), how many people could you serve per hour?
4. If you can have two cashiers but only five people (getting more people is always hard!), what's the best you can do?
5. What if you couldn't change the order of serving? What's the best you could do?
6. How long will it take you to get your lunch?
